Ultrasonic Cleaning System

- Faster, better and damage free cleaning
- Increased distribution of ultrasound energy
- Improved cavitation
- Simple and easy-to-read controls
- High working frequency
- Low noise levels
- High power ultrasound generators
- Wide choice of models with 3 to 90 liters capacity
- Heating temperature and cleaning time control by microprocessor
Ultrasonic Cleaning System

Ultrasonic cleaning is a safe, efficient and modern procedure which ensures perfect cleaning. It can remove even the most tenacious deposits in the shortest time possible. Ultrasonic cleaning greatly reduces the risk of cross-contamination and infection that can occur with manual cleaning.

The SONINA® ultrasonic cleaners are constructed of advanced electronic components and are available in various models. Cleaning times and temperatures are controlled electronically by a microprocessor with a waterproof control panel.

The SONINA® ultrasonic systems are standard equipment in dentistry, surgical, tattoo and piercing studios, chemical laboratories, manufacturing industries, the optical, jewellery, industry, defence industry and others.

For ultrasonic cleaning, instrument pre soak and evacuation systems

- Two tablets added to warm water makes 4 liters ultrasound / enzymatic solution - breaks down proteins and organic matter such as blood, mucus and tissue - anti-corrosive to protect instruments - can be used with any ultrasonic cleaning system - cleans and deodorizes all evacuation equipment - non-toxic, biodegradable, non-toxic - eliminates heavy handling, mixing and storage of liquid concentrates - available in 12 sizes, box of 64 tablets or box of 144 tablets.

Accessories are available on request.

SONINA equipment complies with the following directives:
